

Leveraging data, evidence and digital health in the WHO European Region A year in review 2024

“Technology has the power to fundamentally change how we approach health care. Our goal is to make sure that this change is fair and beneficial for everyone everywhere.”

Dr Hans Henri P. Kluge
WHO Regional Director for Europe

In 2024 the WHO Regional Office for Europe's Division of Country Health Policies and Systems made significant progress in supporting Member States of the WHO European Region through an extensive range of activities, including missions, workshops, briefings and technical guidance. The Data, Evidence and Digital Health (DDH) team led initiatives focused on advancing population health and well-being through data-driven and digital solutions.

The digital transformation of the health sector continues to accelerate, underscoring its critical role in making health care more efficient, accessible and effective. The **progress report (1)** on the Regional Digital Health Action Plan for the WHO European Region 2023–2030, presented during the 74th session of the WHO Regional Committee for Europe in October 2024, highlighted advances made in digital health across the Region. This year, we **took a closer look (2)** at how countries are reshaping their health systems by integrating digital health governance, electronic health records, patient portals, telehealth, mobile health, and big data and analytics. These efforts reflect how countries are increasingly utilizing digital tools to enhance health system resilience and responsiveness.

The Strategic Partners' Initiative for Data and Digital Health (SPI-DDH) (3), a new collaboration network led by the WHO Regional Office for Europe, brought together over 100 leading partners in data and digital health to tackle the most pressing issues related to these fields.

This year also marked the first anniversary of the Regional Office's **four-year partnership with the European Commission (4)**, which aims to strengthen health information systems, data governance and interoperability. This collaboration is pivotal in enhancing access to health-care services for nearly 1 billion people across the 53 countries of the WHO European Region.

This document provides an overview of the WHO Regional Office for Europe's activities and achievements in data, evidence and digital health in 2024.

“Digital health across the European Region is advancing, but our journey is far from over. The success of our work relies on continued collaboration and commitment from different sectors, including those beyond health care. This is why we are proud to have created new networks this year, including the Strategic Partners’ Initiative for Data and Digital Health, and the Health Information Network.”

Dr Natasha Azzopardi Muscat

Director of the Division of Country Health Policies and Systems

Progress report on the Regional Digital Health Action Plan 2023–2030

The WHO European Region’s first Digital Health Action Plan (5), adopted by all 53 Member States at the 72nd session of the WHO Regional Committee for Europe in September 2022, aims to leverage digital transformation for better health. In collaboration with countries, the WHO Regional Office for Europe has moved forward in all 18 areas across four strategic priorities outlined in the plan: setting norms and providing guidance for digital health; strengthening countries’ capacities for governance and digital literacy; fostering innovation through networks and knowledge exchange; and identifying scalable, patient-centred digital health solutions (1). The report is accompanied by a new set of illustrative actions that reflect evolving needs and the latest advances in digital health.

To address the need for evidence-based guidance, the WHO Regional Office for Europe has collaborated over the last two years with countries, international organizations, academic institutions, civil society and other partners to produce 24 technical publications. These include a flagship report assessing the state of digital transformation across the Region, as well as research on artificial intelligence (AI), cybersecurity, telemedicine, digital health literacy, equity, the digital determinants of health, women’s health and the implementation of digital tools.

53

Member States

have adopted the Region’s first digital health action plan

30

countries

have already benefited from several capacity-building activities related to big data, telemedicine, introduction of the 11th revision of the International Classification of Diseases, and strengthening health information systems

We have continued our knowledge-exchange initiatives, such as the **Decoding Data and Digital Health** webinar series (6) and the **Second WHO Symposium on the Future of Health Systems in a Digital Era** (7). To build digital literacy skills, over 30 countries have already benefited from several capacity-building activities related to big data, telemedicine, introduction of the 11th revision of the International Classification of Diseases and strengthening health information systems. We have partnered with the United States Centers for Disease Control and Prevention to launch a special fellowship programme in eastern Europe and central Asia, which helps to improve the use of data science in public health. To date, the programme has been implemented in eight countries.

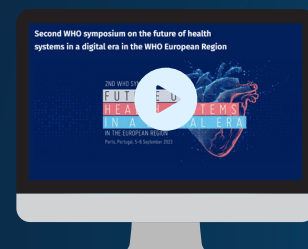

As the Regional Digital Health Action Plan enters its third year, the WHO Regional Office for Europe will keep working closely with countries and stakeholders. The focus will remain on expanding research, fostering partnerships, enhancing capacity and driving innovation. Much of the research will explore how digital health can contribute to climate sustainability, what role it plays in combating antimicrobial resistance, how gender-related issues manifest in digital environments, and how digital solutions can support healthy ageing.

AI remains a major area of interest for the future of health care. Work is under way to develop a report on the status of AI in the European Region and to establish a technical advisory group to provide expert guidance on AI use, in order to ensure that its implementation is safe and effective. To foster discussions on future health-care solutions, the Regional Office will host the Third WHO Symposium on the Future of Health Systems in a Digital Era in the European Region in 2025.

To mark the second anniversary of the Regional Digital Health Action Plan, we have prepared a **short video** (8) featuring WHO staff from across the Region to share our key achievements.

Charting the AI frontier: the WHO Regional Office's groundbreaking efforts and vision for the future

In the fast-evolving landscape of AI, the WHO Regional Office for Europe is pioneering innovative work to harness its transformative potential in health while addressing its challenges. With a series of ambitious projects, the Regional Office is shaping the trajectory of AI development and application in health care, aligning it with equity, safety and human rights.

The Regional Office has embarked on vital scientific research exploring AI's role in mental health, universal health coverage (UHC) and governance. Collaborative efforts with the London School of Economics are paving the way for a comparative analysis of intellectual property and human rights legislation for AI in health, complementing earlier work mapping the regulatory landscape. These studies promise to lay a solid foundation for informed decision-making and policy development.

The first interregional workshop, uniting stakeholders from 14 countries across the WHO European Region and the Region of the Americas, marked a milestone in fostering cross-regional collaboration. Meanwhile, the establishment of an AI working group within the SPI-DDH underscores the WHO Regional Office for Europe's commitment to integrating AI into broader data-driven health priorities.

To guide strategic action, the Regional Office is preparing the first report on the status of AI in the WHO European Region, with 43 out of 53 Member States contributing insights. Set for publication in late 2025, this report will provide a comprehensive view of AI's implementation, challenges and opportunities in the Region.

Capacity-building efforts are also at the forefront. The Regional Office for Europe has successfully completed three cohorts of its "Impact of big data and AI in health care" training, empowering professionals to navigate AI's complexities. Concurrently, initiatives to establish a technical advisory group and a roster of AI experts are underway, ensuring access to top-tier expertise for informed regional guidance.

Finally, the WHO Regional Office for Europe is taking bold steps with its business case to establish a geographically dispersed office on AI, signalling its ambition to create a dedicated hub for AI in health.

As AI reshapes health care, the Regional Office's visionary work positions the Region as a global leader, committed to ensuring that AI serves humanity equitably, ethically and innovatively.

Exploring the digital health landscape in Europe

A new WHO report, *Exploring the digital health landscape in the WHO European Region: digital health country profiles* (2), looks at individual countries to see how they are reshaping their health-care systems through the integration of digital health policies and tools, such as telehealth, mobile health, big data, digital health governance, electronic health records, patient portals and analytics (9).

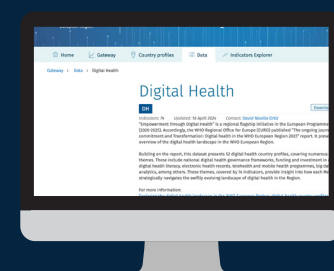

The report includes analysis and insights into how each country is advancing in digital health and helps to identify strengths, gaps and needs in each country so the Regional Office for Europe can provide the necessary tailored support. The country profiles are categorized in seven digital health themes: digital health foundations; electronic health records; national digital health patient portals; telehealth programmes; mobile health services and applications; health-related mobile apps; and big data and advanced analytics for health.

Analysing these elements at the national level can provide insights into how each country navigates the evolving landscape of digital health. At the same time, the report aims to encourage shared learning and to help countries to identify digital health barriers, explore trends, steer the agenda for innovation, and contribute to the implementation of the Regional Digital Health Action Plan.

Greater, more granular detail can be seen in the raw data, which are available at the **WHO European Health Information Gateway** (10). It should be noted, however, that the information presented in the country profiles was collected between April and October 2022, so it does not reflect more recent advances or changes that have been made in each country.

New findings on data, evidence and digital health: tools and technical guidance

“It’s not just about the availability of technology – it’s about ensuring that digital tools are aligned with public health goals and can truly enhance health outcomes.”

Dr David Novillo Ortiz

Regional Adviser on Data, Evidence and Digital Health

In 2024 the WHO Regional Office for Europe released a series of publications aimed at enhancing awareness, providing key data, and sharing technical guidance for countries and health authorities across the Region. A **study on the role of digital health technologies in women’s health** (11) demonstrated the potential of digital solutions to improve health outcomes, promote empowerment and advance equity for women. These benefits were linked to expanded access to health-care services, enhanced maternal health, access to health information, and increased autonomy for women in managing their health.

Access to the Internet, availability of digital devices and digital literacy were found to be among the most urgent digital determinants of health, according to a **joint study led by the WHO Regional Office for Europe and the London School of Economics**, with contributions from other international institutions (12). The review identified 127 health determinants that emerged or changed in a digital age, highlighting the need for a comprehensive approach to digital health governance.

An updated WHO support tool giving **guidance on strengthening health information systems** (HIS) (13) came out in June 2024, featuring additional modules on emergency response information management systems, geographic information systems (GIS), long-term care and migration health data. This tool supports countries in conducting HIS assessments, setting a strategic vision, creating improvement plans and monitoring progress over time.

Read
The role of digital health technologies in women's health, empowerment, and gender equality: project report (11)

To support the expansion of telemedicine, the WHO Regional Office for Europe, in collaboration with the WHO Collaborating Centre in eHealth at the Open University of Catalonia, Spain, developed a **support tool to strengthen telemedicine** (14). This tool offers guidance for telemedicine services, ranging from individual facilities to national health systems, that leverages best practices in international telemedicine. The tool enables stakeholders to assess readiness, establish a strategic direction, identify necessary resources, skills and infrastructure, and monitor and evaluate telemedicine implementations. Additionally, the **Telehealth quality of care tool** (15), developed jointly by the WHO Office on Quality of Care and Patient Safety in Athens, Greece, and the DDH unit, aims to promote high-quality telehealth practices, offering an evaluation framework for care quality and supporting policy and strategy development at national, regional or organizational levels. Furthermore, we reviewed telehealth progress in Europe with a **case study from Norway** (16).

We explored the contribution of nursing and midwifery to leading digital health policy and practice. With the expansion of digital health services, assessing cybersecurity and privacy risks has also become increasingly crucial. The WHO Regional Office for Europe is preparing a publication specifically focused on cybersecurity and privacy risk assessment in digital health for the European Region.

Standard operating procedures for rapid-response products were published to enable countries to provide timely, evidence-based policy guidance, drawing primarily on existing systematic reviews. These procedures offer a valuable knowledge translation tool for health systems, facilitating the delivery of tailored, timely and evidence-informed guidance for policy development and implementation.

Finally, we explored the intersection of reproductive health, mobile apps and social media through an **insightful interview with researcher and scientist Zoya Ali** (17) and highlighted patient-centred digital care in the Netherlands (Kingdom of the) during a **content-gathering mission to Radboud University Medical Center** (18).

Support to countries

In 2024 the WHO Regional Office for Europe provided direct support to 34 countries in data, evidence and digital health. Activities included high-level meetings with health authorities, trainings, the development of specialized solutions, assessments, direct technical assistance and more.

Some of these support activities are listed below

Data governance and interoperability and digital health

- Telemedicine assessment in **Bosnia and Herzegovina** to strengthen primary health care.
- Hosting a delegation from **France** to discuss data and digital health activities at regional and global levels.
- Support to **Ireland** on digital health governance and digital mental health.
- Training on Fast Healthcare Interoperability Resources standards for **Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan** and **Uzbekistan**.
- A bilateral meeting in **Latvia** on collaboration in data and digital health.
- A joint mission to the **Republic of Moldova** with the United States Centers for Disease Control and Prevention to discuss digital health and HIS and to provide technical support to improve knowledge management dashboards.

- Multiple missions to **Romania** to meet with Ministry of Health officials and technical leads to discuss project statuses, successes and challenges.
- Support to **Tajikistan** for digital transformation.
- A mission to **Türkiye** to collaborate on the GIS Hub and host a GIS coordination meeting in Istanbul.
- Support in organizing nominations from the Region for the Open Digital Health Summit, with **Latvia** and **Lithuania** chosen as suitable locations.

HIS strengthening

- Hosting a delegation from **Armenia** to share experience in digital HIS design, including development, implementation, integration, management and evaluation.
- A mission to **Czechia** to review its national HIS with the Ministry of Health and the Institute of Health Information and Statistics.
- Training on tools for telemedicine and HIS for WHO country office experts in **Kazakhstan, Kyrgyzstan, Romania, Serbia** and **Turkmenistan**.
- HIS assessment mission in **North Macedonia**.
- Support to **Tajikistan** for HIS development.

Evidence-informed decision-making

- Support to **Azerbaijan** and **Croatia** in developing evidence-informed approaches to One Health.
- Supporting a roundtable on strengthening the science ecosystem in **Czechia**.
- Training for policy-makers in **Estonia** on using research evidence in health policy-making.
- Support to **Estonia** and **Ukraine** for indicator improvements.
- Support to **Slovenia** on improving guideline development.
- Piloting WHO norms and standards adaptation in **Sweden**.
- Support to **Tajikistan** on strengthening evidence-informed decision-making.

© WHO / Marie Oleinik

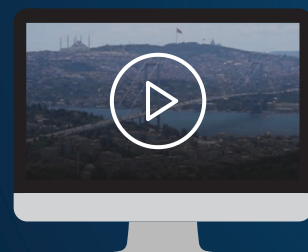

The importance of trainings and events

In collaboration with the United States Centers for Disease Control and Prevention and the University of Washington, the WHO Regional Office for Europe cohosted a high-level workshop on digital transformation in health, held in Istanbul, Türkiye. Senior public health officials from nine countries in eastern Europe and central Asia convened to discuss key topics including data infrastructure for disease surveillance, health information exchange, digital health policy and regulation, and cybersecurity. To learn more about the event and the participants' impressions, watch **this video** (19).

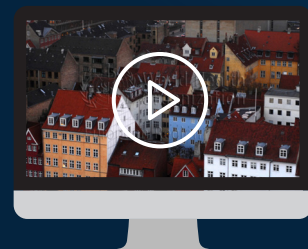

The WHO Regional Office for Europe and the Pan American Health Organization jointly organized a workshop on digital transformation and AI in public health. This event welcomed participants from Belgium, Finland, Greece, Italy, Kyrgyzstan, Ukraine and the United Kingdom of Great Britain and Northern Ireland to discuss activities, technical tools and interregional collaboration on the responsible application of AI in health.

The Decoding Data and Digital Health webinar series (6) continued to advance knowledge on key digital health topics. In 2024 the webinars addressed the role of AI in health, digital health reimbursement, workforce optimization through digital solutions, cybersecurity, healthy ageing in a digital context, and strategies for enhancing digital health literacy.

In collaboration with the Copenhagen Institute for Future Studies, the WHO Regional Office for Europe conducted a three-panel webinar on the Nordic approach to future-oriented health systems development supported by digital health solutions. Participants included representatives from Nordic public and private sectors and the Organisation for Economic Co-operation and Development. A recording of the event is available **here** (20).

Watch this video to learn more about the high-level workshop on digital transformation in health (19)

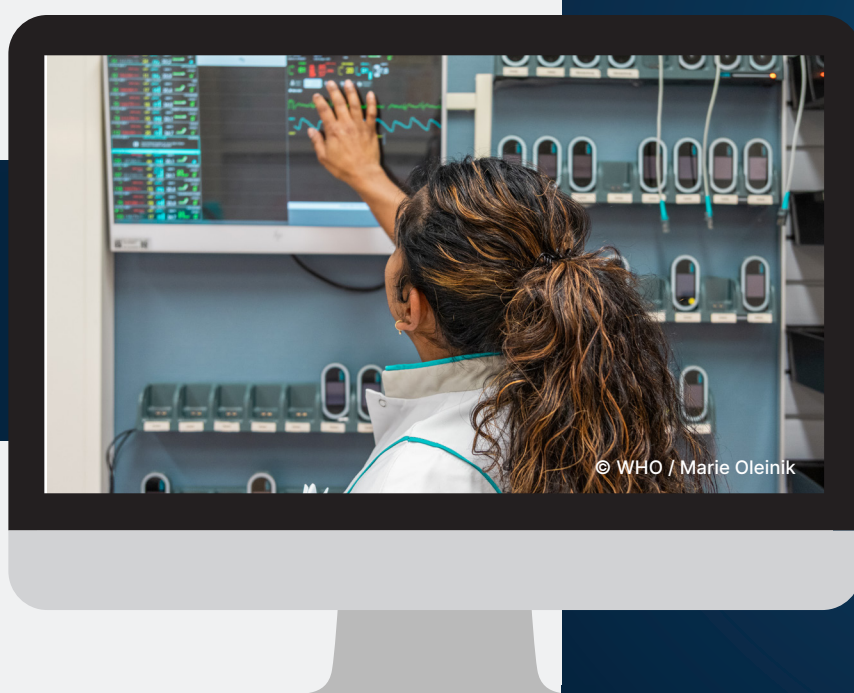

Watch the webinar on the Nordic approach to future-oriented health systems development supported by digital health solutions (20)

The course **Impact training for big data in health care** (21) took place in Valencia, Spain, in collaboration with the Valencia Polytechnic University, for Member States from the Western Balkans. Watch **this video** (22) to learn more about the training outcomes and participants' impressions.

At the Copenhagen **Health Tech Hub Summit** (23) in May, the WHO Regional Office for Europe delivered a keynote address, exploring how technology can address health-care staff shortages and improve care quality and efficiency for patients and health-care professionals.

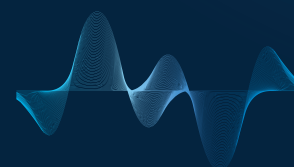

A specialized training for health information experts took place at UN City in Copenhagen, Denmark, and equipped participants with the skills to apply the WHO HIS assessment methodology, ensuring each country's mission is impactful and well supported.

Watch the video from the Impact training for big data in health care course (22)

The SPI-DDH was presented at the fourth Digital Medicine Summit in Moscow, Russian Federation, in September. The WHO Regional Office for Europe also contributed to the Global Health Care Club conference by Politico Executive Network, offering insights on supporting country access to robust health systems, and participated in G20 co-branded events to discuss issues in digital health and data on a global scale.

The WHO Regional Office for Europe participated in the Health Information Management Systems Society 2024 Global Health Conference in Orlando, United States of America. At the Second Global Evidence Summit in Prague, Czechia, in September, the WHO Regional Office organized workshops on adapting WHO norms and standards to local contexts, evidence-based priority-setting, and addressing barriers in guideline implementation. With over 1800 participants, these sessions facilitated knowledge-sharing on practical applications of WHO standards.

each country's mission
is impactful and well
supported

The first annual meeting of the European Centre for Disease Prevention and Control on eHealth-based surveillance covered the integration of electronic health records in communicable disease monitoring. Participants reviewed the SURveillance from Electronic Health Data (SUREHD) project, in which countries of the European Union (EU) and the European Economic Area participate to monitor three priority conditions: severe acute respiratory infection, bloodstream infections and sexually transmitted infections. Discussions also addressed the secondary use of health data by national public health authorities, focusing on the European Health Data Space and HealthData initiatives.

Leading up to the 74th session of the Regional Committee for Europe, our **side event** (24) examined the potential for digital mental health solutions to transform mental health-care systems; there was discussion of good practices, challenges and opportunities to implement digital mental health services, while minimizing harmful effects. Another event focused on AI's role in public health, emphasizing the need for capacity-building, ethical and governance frameworks, and effective communication strategies. The discussions underscored the importance of preventing monopolization of information technology resources, as well as the need to integrate AI into medical education.

Other events included the fourth WHO Community of Practice meeting on AI in health, a workshop on evidence-based policy for One Health, and a webinar on the use of GIS to strengthen health outcomes.

Agreements and partnerships

“No single entity can unleash the full potential of digital health and data. But through the knowledge and understanding cultivated through the Strategic Partners’ Initiative, we can work together to ensure that the values of equity and human rights are at the core of health systems in a digital era.”

Dr Hans Henri P. Kluge

WHO Regional Director for Europe, at the **SPI-DDH launch event** (25)

In June the DDH team launched a collaboration network, the **SPI-DDH** (3), which unites the 53 Member States of the WHO European Region and partners from academic institutions, WHO collaborating centres, and governmental and nongovernmental institutions to tackle issues related to the digital transformation of health systems.

In 2023 the WHO Regional Office for Europe embarked on an ambitious **new partnership with the European Commission** (4) to strengthen HIS and boost health data governance and interoperability in the European Region. The four-year project, cofunded by the EU, builds on the values of the EU’s European Health Data Space and supports health-care services for the nearly 1 billion people in the 53 countries of the Region.

© WHO / Marie Oleinik

To celebrate the first anniversary of the project, we prepared a **short video** (26) highlighting its key achievements so far, which include:

- establishment of a regional Health Information Network for Member States;
- three training courses empowering countries to use big data in health care and to advance their health information systems;
- three publications providing insights into the digital health landscape in Europe; and
- six webinars highlighting key aspects of data and digital health.

As part of this partnership, the WHO Regional Office established the Health Information Network and held an in-person meeting in Copenhagen in June, where discussions focused on challenges and opportunities for HIS across the Region. Priority areas and a workplan for the EU-funded project have been developed with a focus on data collection; digitalization and innovation; analysis, health reporting and knowledge translation; and governance and resources. For each of these areas, a working group was established and a workplan developed.

A donor agreement was formalized with the Government of Portugal, providing €2.5 million in support of a project to develop a WHO European Region strategy on AI for health and health technologies. This funding will also advance specific initiatives related to AI, health technologies, robotics and health entrepreneurship, including pilot programmes and implementation within the Portuguese National Health Service.

EU so far (26)

The DDH team participated in the 2024 Healthcare Information and Management Systems Society (HIMSS) European Health Conference and Exhibition in Rome, Italy. This event brought together 2500 health-care leaders, practitioners and professionals from 84 countries; it featured sessions on AI, telemedicine and integration of electronic health records. The WHO Regional Office for Europe, having previously signed a memorandum of understanding with HIMSS to promote digital health across the European Region, also announced a three-year grand challenge to develop a digital health investment framework aimed at advancing health equity in the Region.

At the Central Asia International Health Investment Forum Strategic Roundtable on Rural Health Access Gaps, held in June, the WHO Regional Office for Europe presented nine “best buys” to improve primary health care access in rural central Asia. These recommendations emphasized multidisciplinary and networked care approaches, multimodal service delivery, improved medicine and product accessibility, workforce reinforcement, increased government investment, and strategic use of data and digital health. Recommendations also underscored the need for a robust digital ecosystem and significant infrastructure investments.

Additionally, the Regional Office designated a new WHO collaborating centre on evidence-informed decision-making at Humanitas University in Milan, Italy. This centre will provide technical support for evidence-based guideline development, adaptation and implementation. In collaboration with the newly appointed centre and colleagues from WHO headquarters, a technical meeting was held to discuss synergies and connect key stakeholders within the evidence-informed decision-making ecosystem.

Regional mandates on data and digital health in the European Region

The **Regional Digital Health Action Plan for the WHO European Region 2023–2030 (5)**, adopted at the 72nd session of the WHO Regional Committee for Europe, is the guiding document for digital health in Europe. It aims to support countries in leveraging and scaling up digital transformation for better health and in aligning digital technology investment decisions with their health system needs, while fully respecting the values of equity, solidarity and human rights.

The plan outlines four strategic priorities to achieve this vision: (i) establishing norms and providing technical guidance; (ii) strengthening countries' governance capacities for digital transformation in health and advancing digital health literacy; (iii) building networks to foster dialogue and knowledge exchange; and (iv) conducting horizon-scanning and landscape analyses to identify scalable, patient-centred digital solutions.

In passing the resolution to adopt the plan, the Regional Committee called on Member States to prioritize digital solutions and necessary capacity-building to advance UHC, protect public health during emergencies, and promote health and well-being. Member States are encouraged to commit to the vision and strategic goals laid out in the action plan.

A flagship initiative, **Empowerment through Digital Health** (27), complements the **WHO Global Strategy on Digital Health** (28) in supporting countries to leverage the use of digital technologies to improve the interface between people and health services; enhance health system performance; and strengthen critical public health functions, including disease surveillance, early warning and risk assessment. Adopted by the World Health Assembly in 2020, the Global Strategy on Digital Health seeks to strengthen health systems worldwide through the strategic application of digital technologies, contributing to the overarching vision of health for all. Designed to be adaptable, this strategy is suitable for use by all Member States, including those with limited digital infrastructure and resources.
